

Simplifying battery replacement for workshops

Get Exide's **NEW** battery replacement tool, and make battery replacement easier...

The BRT-12 will protect your market share as the car parc evolves, and it will help you win new customers that own the most technically advanced cars. All by a price significantly less than anything else on the market.

Just connect the BRT-12 to the vehicle after replacing the battery and follow the step-by-step onscreen instructions to validate the change and to clear all faults from the dashboard, without needing any additional code or original part number from manufacturer.

BRT-12 comes preloaded for VW-Audi and BMW-Mini groups and can be easily updated as soon as other car brands will require a dialogue for battery replacement.

Features...

- Validates battery replacement.
- Clears battery fault codes.
- Suitable for batteries from all brands and manufacturers.
- All code configurations built-in (no computer connection required to operate).
- Directly powered from car voltage (no batteries, no need to recharge)
- 12 language options available from the built-in language.
- Easily updatable software at your own convenience from any computer free for 2 years.

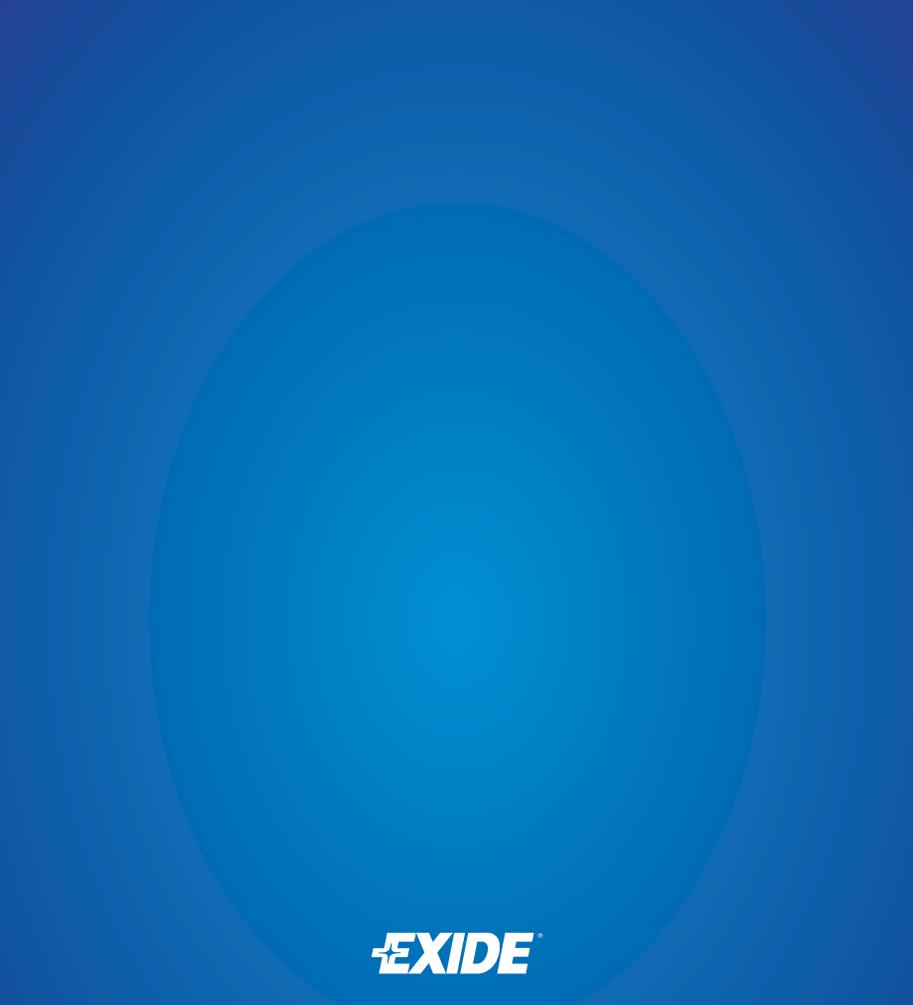

Specifications...

Compliant with car industry and EU electro technical standards:

- J1850 VPW / PWM
- CAN
- ISO High & Low Speed
- Fault Tolerant CAN
