Type UP 610 3-phase

Switchmode rectifier type

- > Two level charging
- > Excellent load and line regulation
- > High efficiency
- > Power factor PF 0.99
- > Small dimensions
- > Fully equipped with micro controller alarm
- > Display of output power
- > Display of earth resistance
- Suits all types of batteries, Shorter recharge time.
- Increased battery lifetime.
- Low energy consumption.
- Sine wave input.
- Easy to install.
- Perfect system control
- Utilization overview.
- Easy fault localization of earth failure.

Rectifier with sine wave input. Microprocessor controlled and two charging voltage levels

The rectifier type UP610 is primary switched, with two charging voltage levels, float rate charge and high rate charge. This implies that UP610 fits perfectly for alkaline (NiCd) batteries, but can of course be utilised for systems with stationary lead acid batteries, either open or recombining (valve) types. UP610 is delivered fully equipped including a micro-processor controlled alarm.

Applications

The two level charging capability of UP610 makes it especially suitable for applications where short recharging times are needed, and in battery systems that requires a very long time to get fully charged on float level charging. UP610 is also suitable for applications where high demands are needed for battery and system surveillance.

Technical description

The rectifier is primary switched with high frequency, 160 kHz, which gives high efficiency > 85%, excellent load and line regulation, small dimensions and low weight. Exact charging is achieved by the very fast regulation. The rectifier is equipped with terminals for connection of remote sense wires which compensate for voltage drop over the battery wiring. A break or a short circuit of the remote sense has no effect on the regulation. The rectifier is prepared for external temperature compensation. Through a specific care and attention, the constant voltage rectifier type UP610 has obtained a very low ripple voltage (0.05% RMS), low acoustic noise and low weight. The front panel includes all user facilities such as main switch, voltmeter terminals, digital volt- and amperemeter, control push buttons and alarm LEDs.

Alarm functions

The electronic alarm board is microcomputer based and contains the following standard alarms:

- > Mains power failure
- > Charger failure, temp sensor failure
- > Battery circuit failure
- > Charging level over/under voltage limit
- > Low battery voltage
- > High battery voltage
- > Ground fault +
- > Ground fault -
- > A-alarm
- > B-alarm
- > Sum-alarm

Reset and LED-test are included. All alarms can easily be inhibited with push buttons on the front. A-, B- and Sum-alarm has separate relays with changeover contacts. The time delay of A- and B-alarm is a programmable standard feature.

Technical specification

AC input voltage	400/230V ± 15%, 3-phase 47-63Hz
Emission	According to EN 50081-1 and EN 50 081-2 (1993)
Power factor PF	Better than 0.99
Cos phi	Better than 0.99
Immunity	According to EN 50 082-1 and EN 50 082-2 (1993)
DC output voltage	Nominal 24V, 48V, 110V and 220V
EMC	According to EN 61000-3-2
Load and line regulation	Better than ± 0.05%
RFI / EMI	According to EN 55022B and CISPER 22 B
Output current limit	102% of nominal current
Constant voltage	I/U according to DIN 41773
Harmonized standard	According to EN 60742 and EN 60950
Efficiency	Better than 85%
Ripple	Better than 0.05% RMS
Cabinet	IP 40 dl

Network

Cabinet

The rectifier is designed for indoor use. The rectifier is built in a metal case with a hinged front door. The front door has the hinge on the right side and the unit is lacquered in a grey colour.

The cabinet has 7 inlet holes for cables, all directed downwards.

Protection

The rectifier is short circuit proof, and the output is fused by a 2-pole fuse.

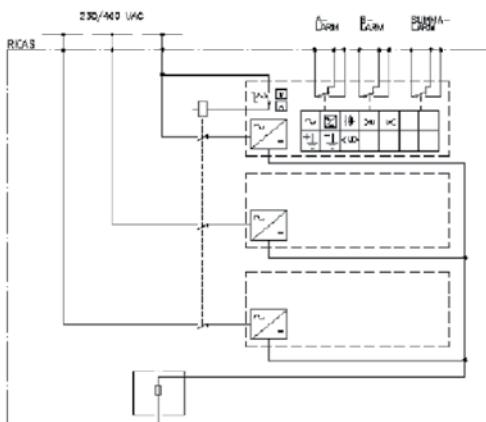

Type UP 610 3-phase

Switchmode rectifier type

Options

- > Sensor for temperature compensation type TG
 - > Separate alarm relay card type SL
 - > Battery room fan control

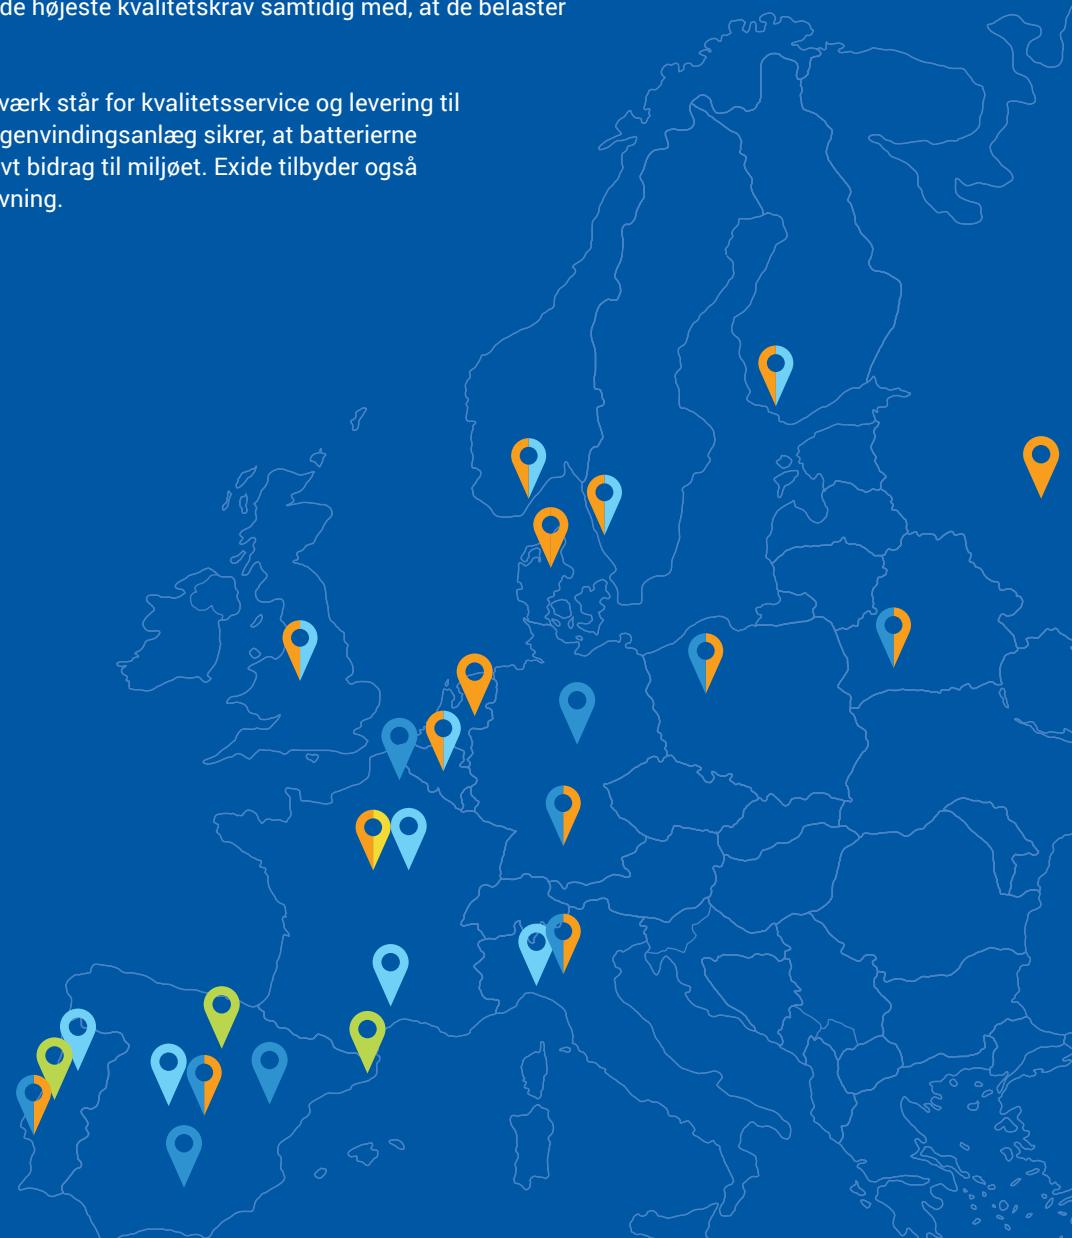

- Cabinet size 430 x 410 x 175 mm is for wall mounting
- Cabinet size 430 x 410 x 270 mm is for wall mounting
- Cabinet size 430 x 410 x 365 mm is for wall mounting
- Cabinet size 430 x 700 x 365 mm is for wall mounting
- Cabinet size 430 x 1250 x 365 mm is a floor cabinet

Exide Technologies, der har aktiviteter i mere end 80 lande og over 120 års erfaring, er en af verdens største virksomheder inden for produktion og genanvendelse af blysyrebatterier. Virksomheden udvikler avancerede energilagringsløsninger til både automobilbranchen og industrien generelt. Førende producenter af biler, lastbiler og gaffeltrucks har endvidere valgt Exide Technologies som deres OEM-leverandør. Exide leverer også etablerede og velkendte varemærker til eftermarkedet.

Exide Transportation producerer batterier til både lette køretøjer og erhvervskøretøjer samt til landbrugssektoren, marinsektoren og fritidssektoren. Industrial-markedet, der hører under divisionen **GNB Industrial Power**, omfatter effektive energilagringsløsninger til Motive Power-applikationer som f.eks. gaffeltrucks, rengøringsmaskiner og andre elektriske køretøjer, der anvendes i industrien, samt Network Power-applikationer som f.eks. telekommunikationssystemer, vedvarende energianlæg og UPS-anlæg.

Exides ingeniører og teknikere har altid været helt i front, når det gælder udvikling af nye teknologiske løsninger. Exides ISO-/TS-certificerede fabrikker er en garanti for, at produkterne er fremstillet så effektivt som muligt, og at de opfylder de højeste kvalitetskrav samtidig med, at de belaster miljøet mindst muligt.

Exides store salgs- og distributionsnetværk står for kvalitetsservice og levering til aftalt tid. Virksomhedens topmoderne genvindingsanlæg sikrer, at batterierne genanvendes, og yder dermed et positivt bidrag til miljøet. Exide tilbyder også diverse ydelser, tilbehør og energirådgivning.
